

OUR SOLUTION

FOR TOTAL GAS RECOVERY

COST EFFECTIVE, FLEXIBLY OPERATED,
AND ENVIRONMENTALLY SOUND DEGASSING

The new mobile Gas Recovery System patented by GRS Europe offers a highly efficient, clean and cost-effective method of recovering chemical vapours from liquefied gas storage tanks and vessels during cleaning, product change over and cooling. This new technology based on cryogenic condensation with liquid nitrogen, minimizes atmospheric emissions of chemical vapours and eliminates the need for flaring or incineration. GRS Europe contributes to your sustainable development policy.

To find out how the GRS unit can work for you, contact Sander van Rest at:
